

Claims Operations: Analyst Foundations

Business question, KPI definitions, quality checks and descriptive analysis

SYNTHETIC DATA ONLY | This scenario is not real insurer or market performance.

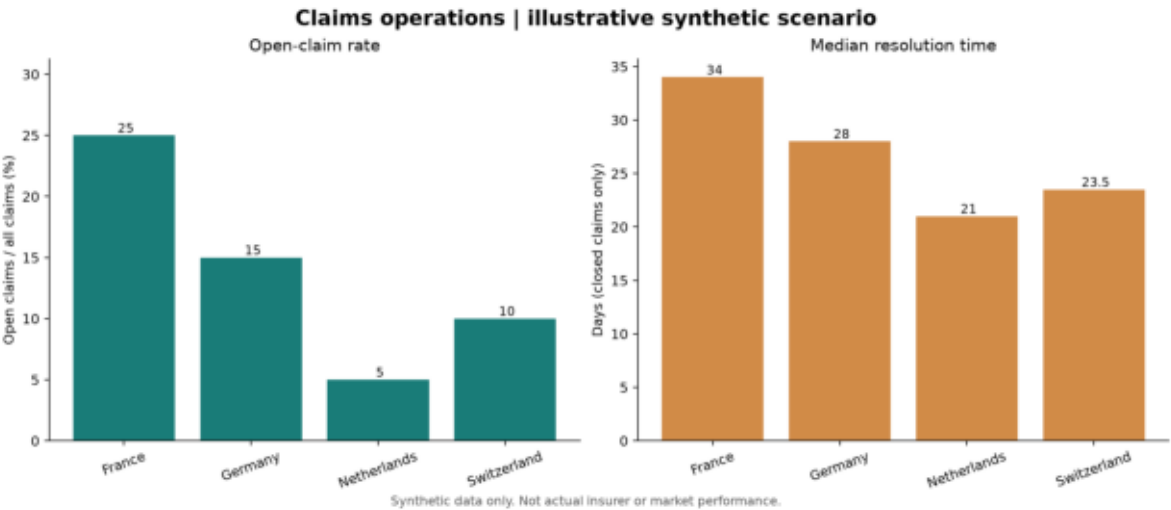

Business question

Which scenario markets have the largest open-claim backlog, and how does the resolution time of closed claims vary?

Market KPIs (illustrative sample)

Market-level KPIs

France: 60 claims, 15 open (25.0%); median close time 34.0 days
Germany: 60 claims, 9 open (15.0%); median close time 28.0 days
Netherlands: 60 claims, 3 open (5.0%); median close time 21.0 days
Switzerland: 60 claims, 6 open (10.0%); median close time 23.5 days

Method and interpretation

240 generated rows; April 30, 2025 snapshot; required-field, status/date and amount checks.

Open-claim rate = open claims / all claims. Median resolution uses closed claims only.

All observed differences come from the transparent sample-generation rules. They are not evidence for operational decisions, causal effects or real-world market comparisons.
